[Menvi-discuss] is there an accessible tuner that emits a hands-free continuous tone

I am working on playing long tones on my flute as part of my warm-up. My teacher has suggested finding a source that will maintain a continuous tone on a given pitch so I can be sure my long tones are not going flat. My teacher has a tuner that will do this, but it is on a metronome. Thank you.

Hi Dana,

I don't know of an app for this.

But I would just use something like voice recorder on my phone and play each note I wanted to work on on a keyboard for as long as needed.

Note the keyboard because the note doesn't decay like it might on an acoustic instrument.

You can then use the playback of that for your practice.

If I was searching for an App I would look for something like tone generator in the app store rather than tuner. Garage Band or similar might be easily able to do this. I don't use it, so don't know.

You could also try talking tuner. It doesn't play the note (well I don't think it does but I wouldn't have been looking for that), but it does give verbal feedback of the note pitch including how many cents flat or sharp it is. It is available from the App store. I'm not 100% sure if it updates the verbal feedback as the note goes on or just gives it once at the start. I can check later if it helps, my phone is just in the middle of doing an update right now.

Jeanie

Hi Dana

There is an app called ToneGen Audio Tone Generator by NCH Software that will play a tone of a specific frequency or pitch. It uses pure tones rather than specific instruments but it would be worth considering if you don't get better options. It has a Windows and an iOS version. I would describe it as reasonably accessible on both platforms.

Bruce
